

HEALTHCARE

Top 5 Reasons for Analytics

2013.8.07

Knowing is King

www.largentum.com

1 Manage Populations

Improve patient outcomes through intelligent management of population data. This is massive amounts of data and can only be managed with advanced technology.

2 Regulatory

The penalties for non-compliance can be very high for healthcare organizations. Find out where there are potential compliance problems before you are audited and use this data to show your efficiency capabilities.

3 Workflow Optimization

Identify and remove the bottlenecks in your work processes and achieve higher revenues with lower cost across your organization.

4 EHR Utilization

All EHRs are not equal. Many well intentioned physicians struggle with compliance on EHR systems. Find out who is in need of additional support and proactively reach out to them.

5 Change Management

The one constant in healthcare is that there will always be change. Being able to understand the impact of change before it happens will give you the right insights on how that change will impact your organization - resulting in better preparation.

Insights

www.largentum.com

- **Increase profitability by understanding what are the revenue drivers and cost adders.**
- **Find factors that are impacting patient health.**
- **Identify workflow slow down points and optimize for revenue recognition and patient health.**
