

BIG DATA

Its all about analytics

2013.8.07

- **Population Management**

The management of large numbers of patients requires technology in order to leverage the best use of this treasure chest of data. Data without discover and analysis is nothing more than added overhead because of the storage and support cost.

We unlock your data and transform it to an asset for revenue creation and cost reduction. The MediSmart™ Technology allows for the intelligent prediction of patient outcomes based on data discovery, enabling powerful patient care insights that drive quality outcomes upward.

- **Case Study**

A Physician wants to know what percentage of her diabetic patients are visiting the patient portal and reading about healthy food choices. The MediSmart™ systems reported that only only 3% of patients over 280 pounds have read the content and that 72% of these patients have not had an office visit in the last 6 months. She decides to proactively send emails to these patients and requested a follow up office visit.

Within 6 months 90% of these targetted patients had read the materials, 55% had an office visit, and there was precipitous drop in reported diabetic complications. The added benefits were an insurance incentive bonus and increased office visits during the time period.

- **MediSense™**

MediSense is your secret weapon for the detection of workflow optimization that will lower your cost and increase revenues with more velocity.

Where is Your Bottleneck?

The MediSense™ solution will automatically seamlessly monitor your practitioner workflow to determine where opportunities for optimization exist. Within a few clicks you can determine what part of your process is pending and the impact it has on revenue recognition

- **How much revenue are you losing every day?**

Understand exactly what amount of revenue you are losing by solving your identified bottleneck. Take a look at your financial reports from an earlier period and compare the improvements that result from removing the identified problems.

- **What else can it do?**

Contact us at largentum.com or info@largentum.com to learn how hospitals are using this technology to find system level IT problems that are causing unplanned outages. This technology is nothing short of amazing!!!

Insights
