

COMPUTERIZED PHYSICIAN ORDER ENTRY

THE CHALLENGE

Revenues are down and expenses are up as pressure is being built to find new sources of revenue within your hospital. You have an excellent set of care providers and great lab capabilities but you cannot capitalize on these assets.

- Different EHR systems exist in multiple facilities
- Cost is a major consideration for implementation
- The infrastructure investment needs to be preserved and leveraged
- Security remains an important requirement
- The architectures of these systems are incompatible and will never natively communicate
- Standards and regulatory requirements are continually changing

THE CPOE SOLUTION

Developing an integrated solution that allows care providers to use their existing clinical systems to place physician orders with the hospital will support revenue growth without increasing patient stays at the hospital. Our approach represents the ultimate in deploying a value based solution that integrates seamlessly with your existing heterogeneous infrastructure.

- You will not need to invest in a Health Information Exchange
- Incorporate emerging and best practices
- Flexible and adaptable to evolving federal and state requirements
- Increased and Improved Physician Orders
- Increased Revenues for the hospital and/or labs
- Allows for incremental revenue opportunities, such as imaging.

COMPUTERIZED PHYSICIAN ORDER ENTRY

CREATING VALUE WITH CPOE

A Computerized Physician Order Entry (CPOE) system provides value for the hospital and lab because it allows for the re-use of existing assets to generate new and expanded revenues. The ability to efficiently process these orders provides a benefit to physicians who are affiliated with the hospital and to additional physicians who find value in using this service. It's the next generation of CPOE and we are ready to deliver this customized solution for your needs.

- Saves time for physician orders through streamlined communications
- Compliant with all security standards for healthcare, HIPAA and HITECH
- An affordable solution that will drive increased revenues
- Fully integrated custom solution that allows for secure exchange of data without an HIE

About Largentum, Inc.

Largentum, Inc. was founded in Boulder, Colorado in 2009 with a focus on the acceleration of workflow in hospitals and clinics through speech recognition and process improvement. The company has grown to support the full revenue cycle with a strong emphasis on best-of-breed consulting services and technologies that focus on ease of use, interoperability, affordability, quality, mobility, and collaboration. These solutions are developed directly by Largentum and our strategic technology partners for a complete end-to-end solution with deployments in the USA and Europe.
